	/Harish T Dass/ Primary Examiner, Art Ui	nit 3692	

Continuation of 13, Other: Applicant's arguments filed have been fully considered but they are not persuasive.

The Examiner respectfully disagrees with applicant's remarks, the Examiner has established a prima facie for the claimed limitation, and the proposed claimed limitations are patentable distinguished for disclosed prior art of record.

In response to Applicant's remark (recitation page 15) "The cited references fail to...", Examiner respectfully disagrees. With broadest reasonable interpretation of the claim, the office action is proper and combination of references (Nieboer-Laffe-Martin) discloses the process of claimed invention (business method) which is implemented by the analogous system disclosed by primary reference Nieboer (client/server application and form views for inputting orders), with respect to applicant's argument that Nieboer is directed to "electronic system for trading ..." is nonanalogous art, it has been held that prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for nejection of the claimed invention. See In re Oetlike, 977 F.2.d 1443, 2 d USPO2d 1443 (Fed. Cir. 1992). In these, see, Nieboer system is capable to perform the transaction process claimed by the applicant (buying and selling stocks, company, products, et car economic transactions, unless Examiner is missing something). Nieboer, Jaffe, and Martin disclose known elements (see KSR).

In response to - storing "information on ownership rights in the company relating to the individual". Examiner disagrees with applicant that "data storage medium", wholis in positively claimed. It is well-known that "data storage medium", volatile/lon-volatile data storage devices (hard-drives/DVD) is (are) inherent part of the computers/servers, with Examiner's experience database is stored on the hard-drives, where rational database such as Informix, DBII, Oracle, Sybase are capable of storing large amount of information in many related tables and this can be any type of information. Therefore, the database disclosed by primary reference is capable of storing any information such as name of owner of security who trades, account number of trader, social security or tax. ID of the traders, type of security, traders addresses/phone number, contract, etc. for any interduse, and storing "information on ownership rights in the company relating to the individual" is patentable distinguished from any other type of information stored on the database.

If a prior art structure is capable of performing the intended use as recited in the preamble, then it meets the claim. See, e.g., In re Schreiber, 128 F.3d 1473, 1477, 44 USPO2d 1429, 1431 (Fed. Cir. 1997)

In response to "a risk associated with the first form of ownership is limited to a predetermined amount, the predetermined amount being least than an initial investment of the individual in the first form of ownership." Examiner respectfully disagrees in limitation is for "determine, ..., that the individual is entitle to convert a first form of ownership in company to a second form of ownership." The wherein clause is not give patentable weight because it is descriptive. There is no step following "wherein clause" to claim what will be done in case the amount is higher or equal to predetremine amount to the second form of ownership. However primary refree (Nieboer) disclose inherent risk of the security trading, it would have been obvious at the time the invention was made to a person having ordinary skill in the art that the maximum risk (loss) cannot be more than what you paid for the securities, see default setting or.1 sines 40+, which means the trader can configure his/her default settings including limits, and Cap for reducing risk col. 17 lines 58+ which means limit on loss, and col. 3 conditional order with limit of again/loss.

In response to "modifying the trading system in Nieboer to implement a customer loyalty program as disclosed by Raphel and/or Jaffe.", since the claimed invention is merely a combination of old elements, and in the combination each element new the sum effunction as it did separately, and one of ordinary skill in the art would recognized that the results of the combination were predictable (see KSR).

In response to applicant's argument that "allow traders to buy and sell security instruments anonymous", the fact that applicant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious. See Ex parte Obiaya, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985).

In response to "modifying the trading system in Nieboer to implement a customer loyalty program as disclosed by Raphel and/or Jaffe.", since the claimed invention is merely a combination of old elements, and in the combination each element merely would perform the same function as it did separately, and one of ordinary skill in the art would recognized that the results of the combination were predictable (see KSR).

In response to applicant's remarks regarding "Claims 1-12 and 48-49", Examiner respectfully disagrees, see Supra..
